GO: Day 14 WGCNA MEgreen

term

```
mRNA splicing, via spliceosome
                                                                 formation of cytoplasmic translation initiation complex -
                                             heparan sulfate proteoglycan biosynthetic process, enzymatic modification
                                                                          formation of translation preinitiation complex
                                                                                               telomere maintenance
                        maturation of SSU-rRNA from tricistronic rRNA transcript (SSU-rRNA, 5.8S rRNA, LSU-rRNA)
                                                                            enzyme-directed rRNA 2'-O-methylation
                                                                            establishment of mitotic spindle orientation
                                                                           release of cytochrome c from mitochondria
cleavage in ITS2 between 5.8S rRNA and LSU-rRNA of tricistronic rRNA transcript (SSU-rRNA, 5.8S rRNA, LSU-rRNA)
                                                                                                   metabolic process
                                                                                               cytoplasmic translation
                                                                                        box H/ACA snoRNP assembly
                                                                                 tropane alkaloid biosynthetic process
                                                                                   regulation of COPII vesicle coating
                                                                                    ribosomal large subunit assembly
                                                                                                    RNA methylation
                                                                                                     cristae formation
