RND3

Bar chart showing −log10(gene p−adjust) values for the following categories (top to bottom):

- cytoplasmic vesicle
- GTPase activity
- protein kinase binding
- cortical cytoskeleton organization
- plasma membrane
- cell cortex
- GTP binding
- intracellular membrane−bounded organelle
- establishment or maintenance of cell polarity
- cytoskeleton
- cell projection
- actin filament organization
- protein binding
- focal adhesion
- regulation of cell shape
- regulation of actin cytoskeleton organization
- cell migration

x-axis: −log10(gene p−adjust), ranging from 0 to 1
